Subject: quick call on Beverly Harbor

Hi Regina, please give me a shout if you have a minute as I think EPA should weigh in on this item. Some background

- request for dredging of Bass River in Beverly Harbor recently arrived in Regulatory and Norm reached out to us for coordinates for placement at MBDS – contractor wants to start next week
- the suitability determination for this project was completed in 2008 based on 2007 data
- sediment has some of the highest PAH, pesticides, chromium, and mercury we've seen – many hits above ERM
- it was determined as "suitable" (Ed Kim performed the risk modeling) but Norm cannot locate the full biological testing data package for our review.

As this is a MPRSA site, is there a requirement that extensions of the permit be approved by EPA?
Please try my mobile number if I don't pick up on the office line - thanks, Steve
